

Introducing a new chapter in the history of masonry manufacturing. 1946 was the year Hattiesburg Concrete Products first began producing heavy and light weight concrete blocks. Located near the banks of the Bouie River in Forrest County, Mississippi, on one of the largest natural deposits of sand and gravel, the block plant soon made a name for itself as a producer of reliable, durable building materials.

This history grows today with the renaming and consolidation of masonry manufacturing plants from Texas, Louisiana and Mississippi.

Already a major provider of building material as the South recovers from recent hurricane devastations, the newly formed American Concrete Product plants are geographically located to provide optimal delivery time for every product purchased.

We look forward to serving the southeastern United States building community. Our commitment is to continue providing quality products for the long term rebuilding of the South.

Regardless of the project size, American Concrete Products has the masonry product to match your need. Our customers span from the weekend do-it-yourselfer to multi-million dollar professional contractor. From small to large, each customer is given the same broad benefit of a professional sales staff and vast product inventory,

Concrete brick building features are shown in these photos. This type of brick creates an excellent sound barrier and increases energy efficiency. Call our sales staff today to learn more of the valuable benefits of concrete brick.

According to the *Concrete Network*, "The use of concrete pavers, often referred to as paving stones, is growing rapidly on both commercial and residential construction projects. Pavers interlock together to form a patterned surface which can be put into service immediately. Pavers are manufactured in various textures and colors. A big benefit of pavers is that they can be removed and re-installed, which reduces future service interruptions." (photo detail of concrete pavers)

More than just a building material, the concrete block can also be an excellent decorative accent.

American Concrete Products - Hattiesburg, MS

The flagship of production plants, the Hattiesburg location began operation in February, 2007. Operating with all state-of-the-art computerized equipment, the plant is capable of producing nearly half a million blocks per week. Formerly Hattiesburg Concrete Products, the new plant incorporates the knowledge and skill of long time employees.

American Concrete Products - Tatum, TX

Previously known as American Block Company, the plant located in Texas manufactures regular and tumbled concrete brick in a variety of colors. Dependable delivery and a quality product are this plant's hallmark. An affordable alternative to traditional clay brick, concrete brick is a favorite with builders and designers alike.

American Concrete Products - Lafayette, LA

Located with easy access to I-10, the Lafayette plant produces concrete blocks. With numerous block molds ready to go, this plant can easily manufacture any product currently on the market. Just let them know what you're looking for!
